

27 October 1986

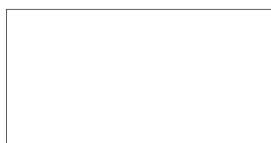

MEMORANDUM FOR THE RECORD

SUBJECT: NCPC Study

1. On 24 October 1986, I was informed by Mr. Don Bozarth of the National Capital Planning Commission (NCPC), that they will participate in a study sponsored by the Council of governments (COG) to identify height sensitive areas. NCPC intends to contact Federal agencies to see if height restrictions should be imposed on new construction projects in any areas so as not to interfere with the operations of existing Agencies. This study is a direct result of the controversy over the Port America project which may impact Federal Aviation Administration operations at National Airport.

2. Mr. Bozarth stated that NCPC is aware that there may be considerations other than safety or aesthetics (such as security) which may warrant consideration of imposing height limits.

3. The purpose of this Memorandum for Record, is to document the existence of this program so that Agency management may address the issue if deemed appropriate.
